

VPN ACCELERATOR CARDABSTRACT

The VPN accelerator card of this invention comprises: an interface connector to connect particular interface connector slot of a computer equipment; an interface
5 controller to convert signals and data in a manner that such signals and data are suited for transmission to said computer equipment through said interface connector; a VPN accelerator to automatically direct, after said VPN accelerator card is linked to a particular local network system, the computer equipment connected to said VPN
10 accelerator card to VPN server of a particular network system; and a local network controller to automatically search a local network system and to link said VPN accelerator card to said local network system.
